WHEELSEYE

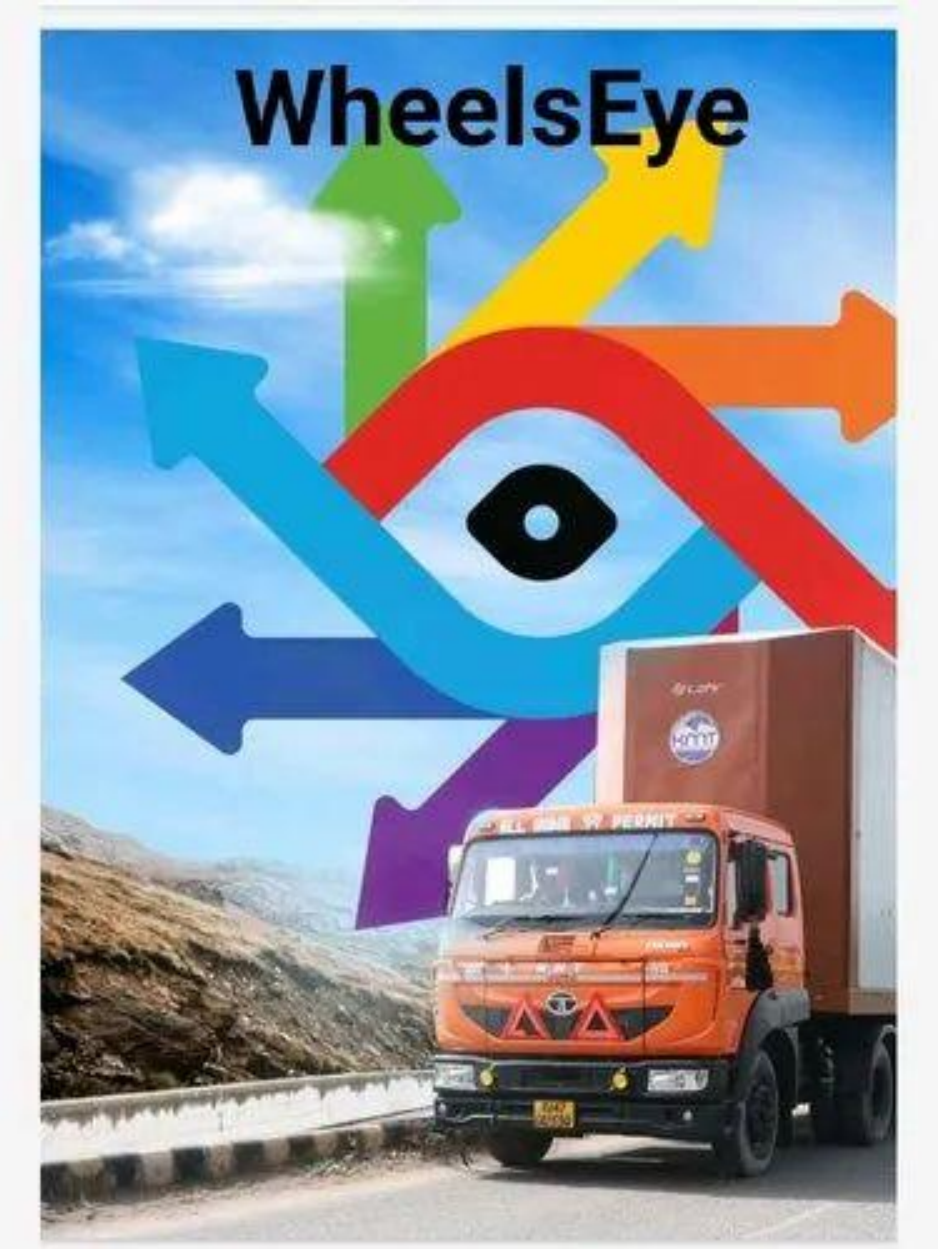

Find an AI Opportunity in a Real Company

Welcome

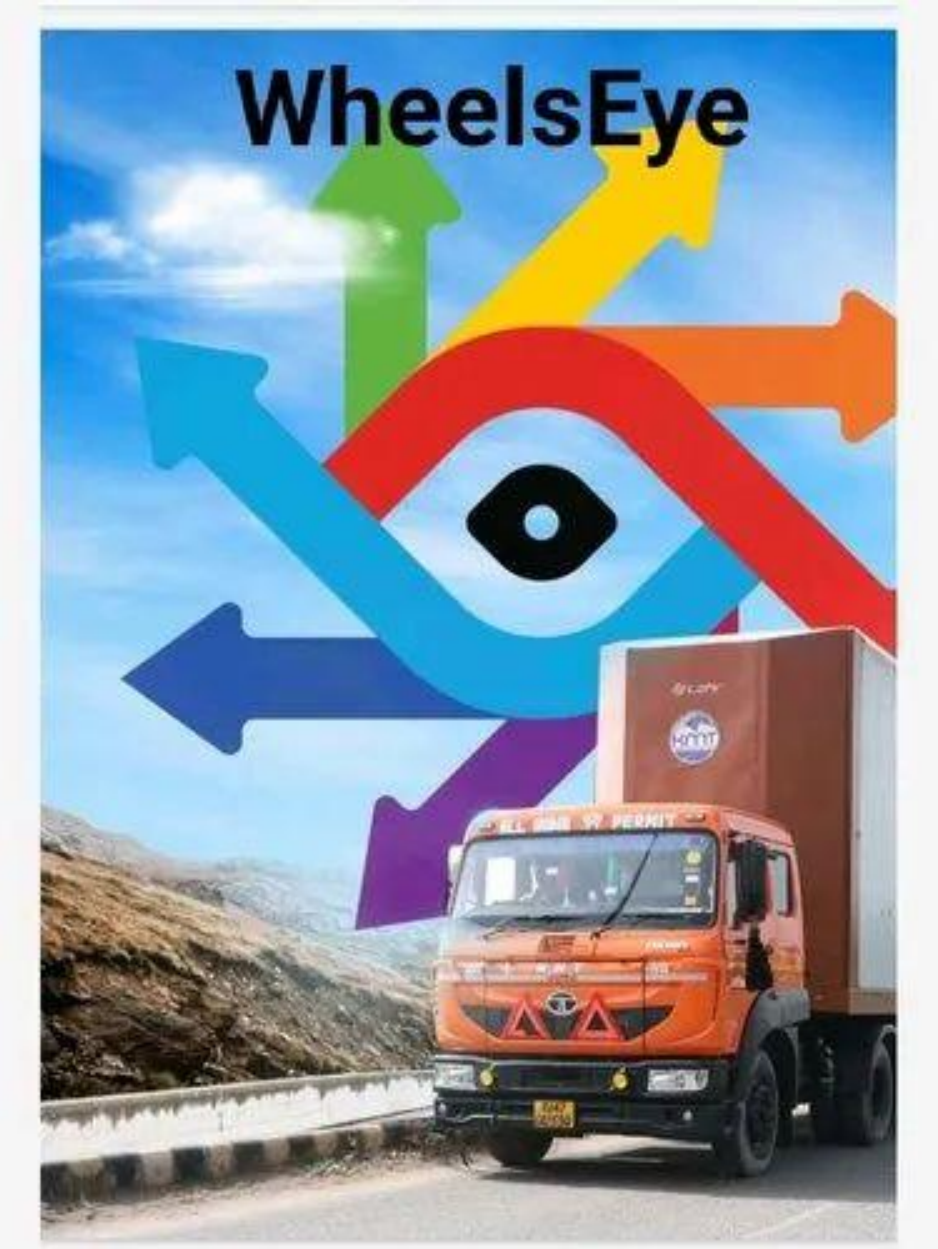

I’m Imran Ahmad, AI PM aspirant from Cohort 3

- Expertise in AI-driven business solutions
- Passionate about scaling startups
- 15+ years in tech innovation and data analytics

We are focusing on a prominent Indian logistics SaaS and freight marketplace - **WheelsEye**

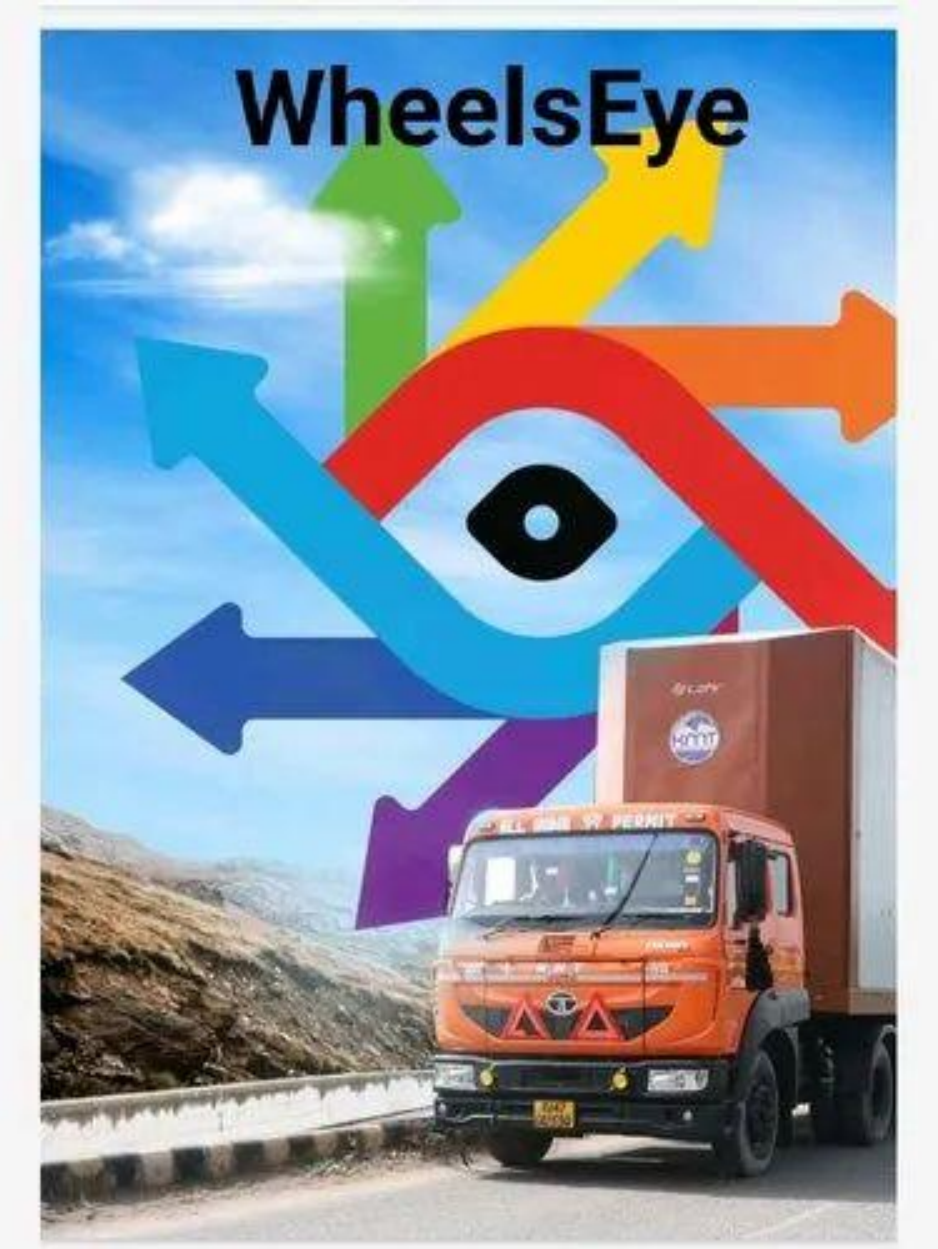

1. What does the company do and who pays for it?

What it does

- Digitizes the fragmented Indian trucking ecosystem.
- Provides software subscriptions and GPS/telematics hardware to small and medium fleet owners
- Manages electronic toll payments (FASTags)
- Operates a Full-Truckload (FTL) marketplace connecting commercial enterprises, manufacturers and traders with verified truck operators.

Who pays for it

- **Fleet Owners & Transporters –** *they pay for software subscriptions, bundled GPS/IoT hardware and any other VAS*
- **Shippers (Enterprises, SMEs, and traders) –** *they pay freight commissions and service margins to book / move goods across India.*

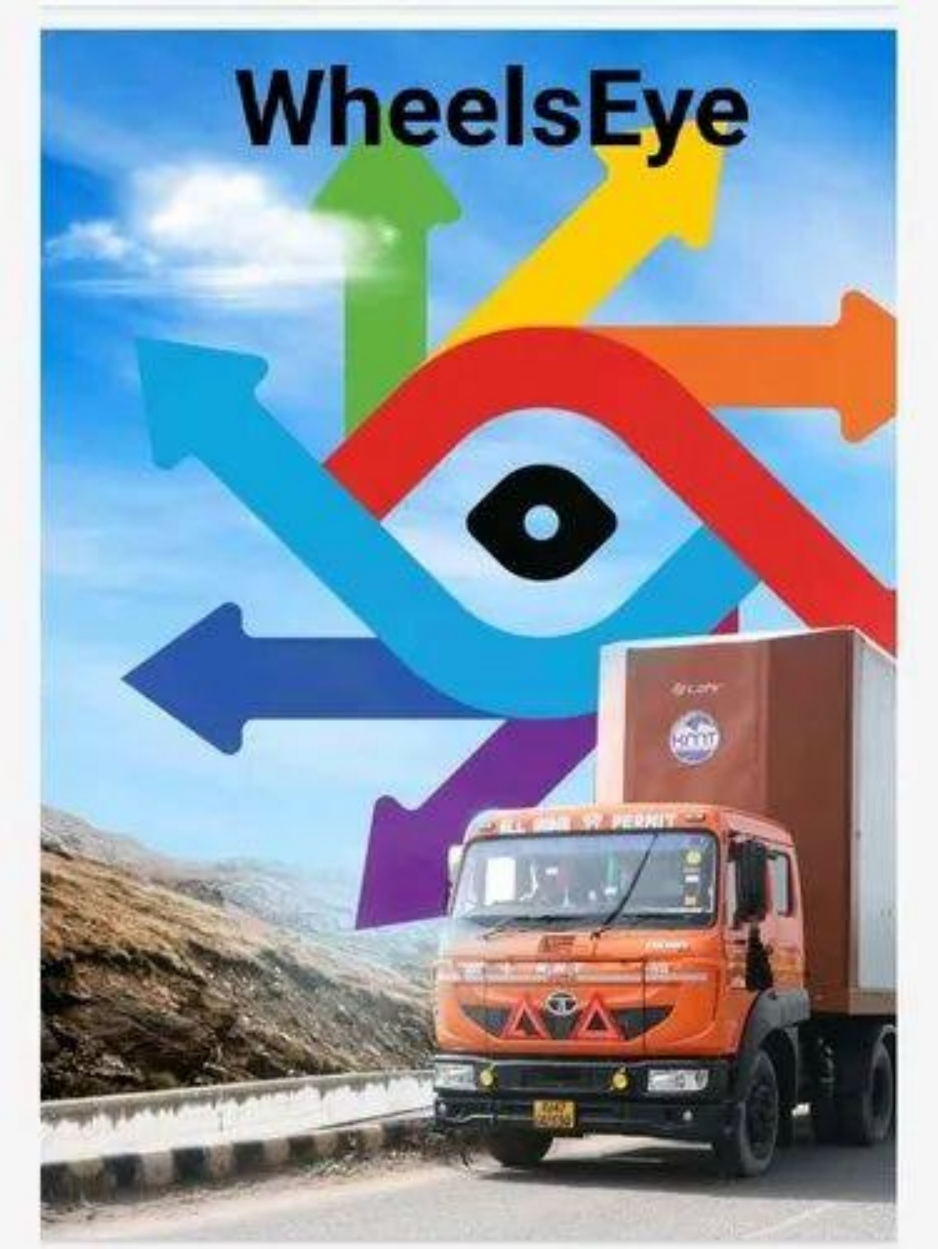

2. How does it make money?

SaaS & Software Subscriptions

₹

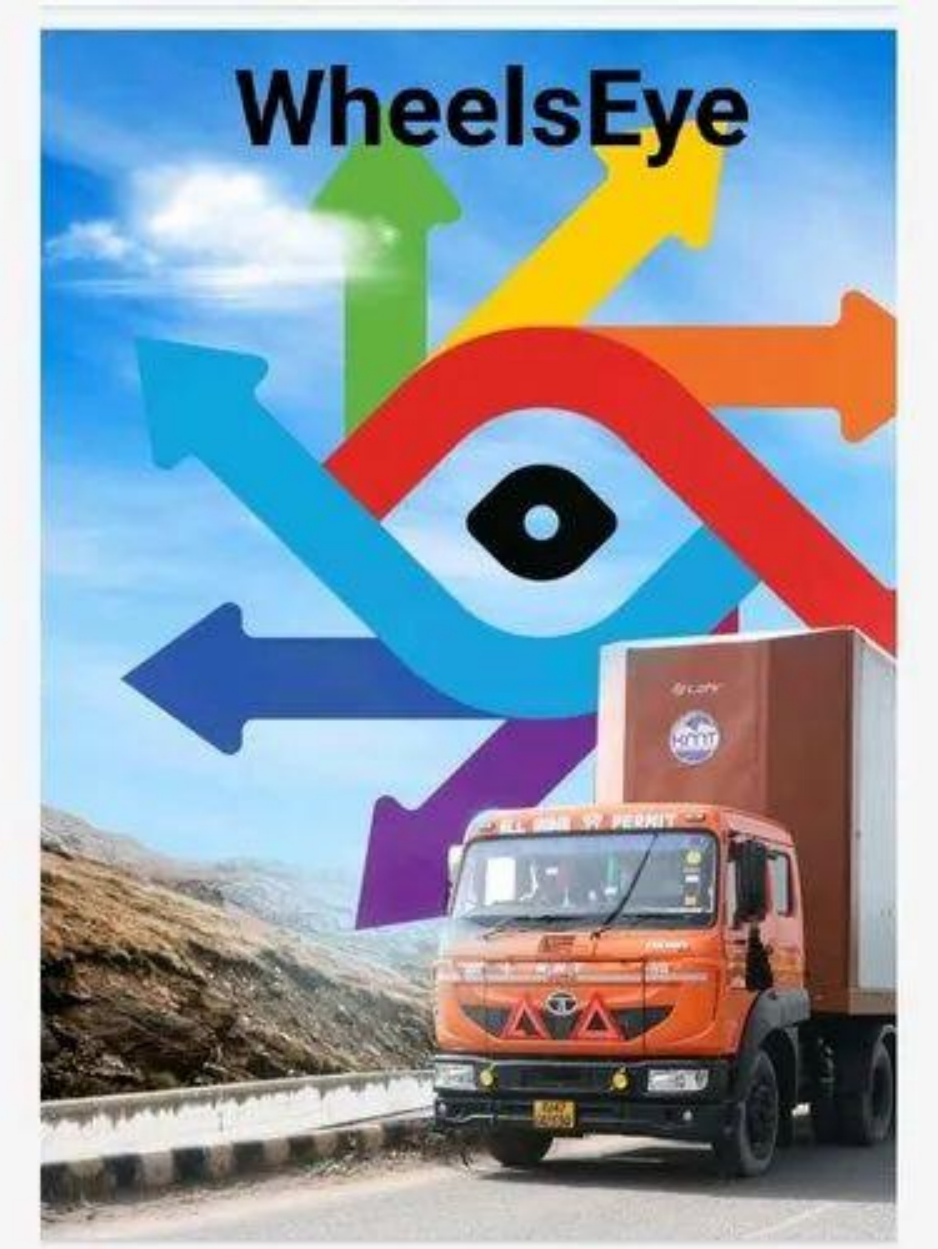

Hardware & Bundled Solutions

Marketplace Commissions & FASTag Services

3. What are the main things it has to get right to run well?

- Device Reliability & Data Uptime
- Carrier Trust & Supply Liquidity
- FASTag & Financial Reconciliation

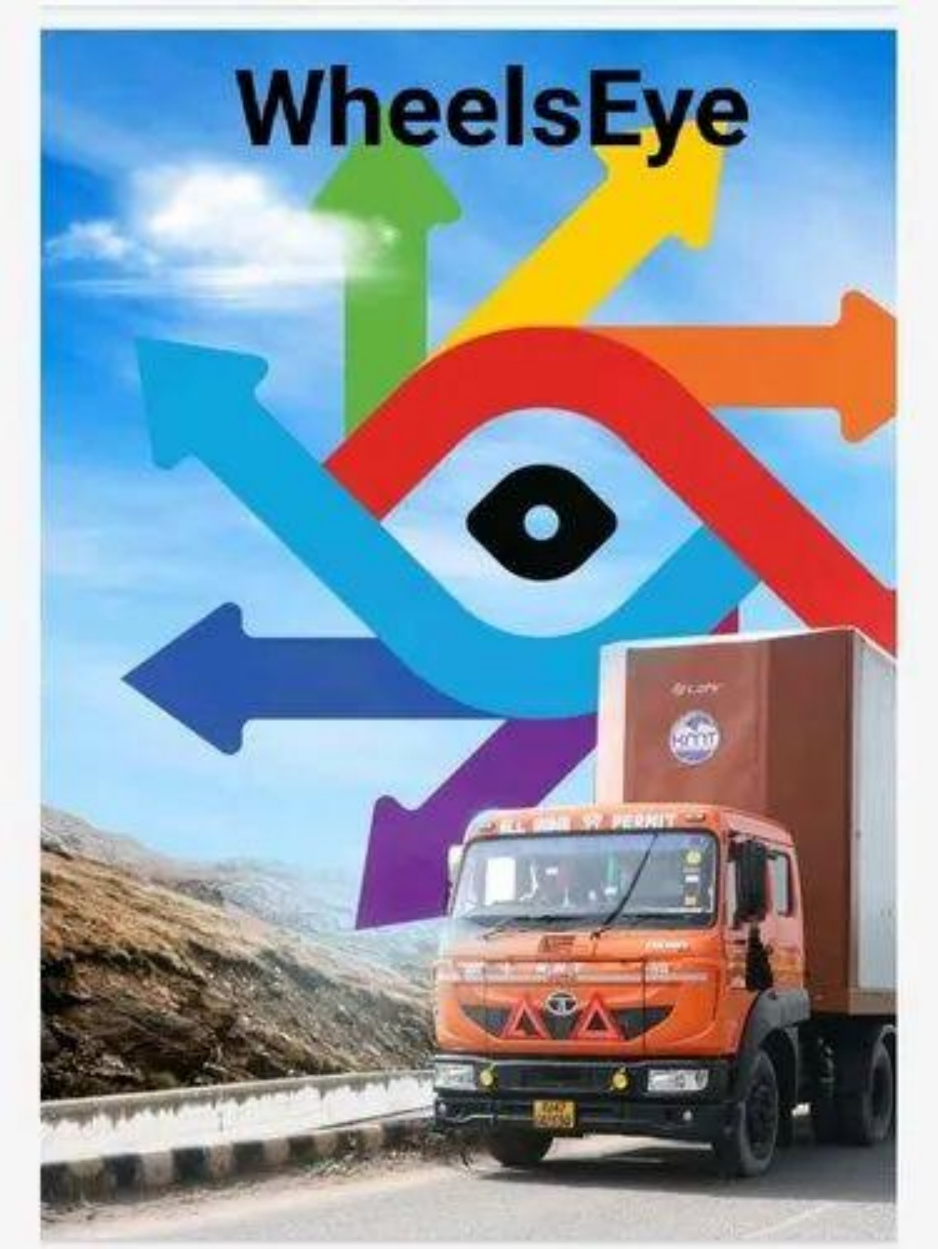

4. Where do things go wrong, or get slow, expensive, or frustrating?

Field Support & Hardware Maintenance Friction:

Informal Credit & Cash Flow Chasing

Fragmented Demand-Supply Matching

5. What information or data does the business collect along the way?

- Telemetry & Geospatial Data
- Financial & Transactional Logs
- Operational & Compliance Records

Suggestions: AI features

5. What information or data does the business collect along the way?

Feature-1	Problem it solves	Type of AI	Data needed	What it improves	Metrics it will impact
Vernacular WhatsApp Dispatch & Negotiation Agent	• Freight brokers spend excessive time in negotiating rates manually • Drivers in Tier2/3 are not tech-proficient or with English as a mode of business language • Different states have different languages; may cause communication gap between parties	Generative AI (LLMs, Multimodal Speech-to-Text, Text-to-Speech & Speech-to-Speech)	Historical lane pricing data, live shipper load boards, past WhatsApp chat transcripts, and regional dialect voice datasets.	• Speed and scale of load matching, driver engagement friction and the manual workload of human dispatchers. • Bridge communication gap between parties; instilling higher trust in transactions.	• Lower time to book a load • Lower cost-per-load-booked • Driver retention/engagement rates.

5. What information or data does the business collect along the way?

Feature-2	Problem it solves	Type of AI	Data needed	What it improves	Metrics it will impact
Automated Proof-of-Delivery (POD) & Damage Vision Inspector	• Getting paid by shippers requires collecting/submitting signed physical documents. • Drivers often delay sending paper slips • Manual invoice reconciliation is slow and prone to human error. • Paper slips may get damaged or lost	Image AI (Computer Vision, Optical Character Recognition (OCR) and Object Detection)	• High-volume image datasets of signed paper receipts / challans, delivery receipts • Cargo damage reference images • Manifest shipment records	• Cash flow velocity, invoice accuracy • Dispute resolution speed for damaged goods • Administrative overhead.	• invoice processing cycle time • Manual data-entry error rates. • Higher successful and secure shipments delivered

5. What information or data does the business collect along the way?

Feature-3	Problem it solves	Type of AI	Data needed	What it improves	Metrics it will impact
Driver Safety & Drowsiness Audio Telemetry Monitor	• Driver fatigue and fatigue-induced accidents on highway routes • Safety risks to drivers, cargo loss liabilities and insurance overhead.	Voice AI and Vision AI	• In-cabin audio streams, driver audio behavioral baselines, harsh braking/acceleration telemetry events, and historical accident logs. • Video feeds of drowsy driving	• Driver alertness • Proactive safety interventions • Overall fleet safety compliance.	• Lower accident frequency rate • Higher insurance claim payouts (if any) • Higher safety incident reports.

5. What information or data does the business collect along the way?

Feature-4	Problem it solves	Type of AI	Data needed	What it improves	Metrics it will impact
Working Capital Recommender	• fleet operators regularly face short-term liquidity crunches for fuel and tolls.	Recommendation AI (Collaborative Filtering, Predictive Models & Predictive Credit Scoring)	• Real-time FASTag toll transaction logs, historical route destination data, trip completion histories, fuel purchase records and cash flow patterns.	• Timely and predictable working capital access for small operators.	• Higher number of Fintech lending • Shorter cashflow or working capital cycle

Thank you for your time...
